

### General Benefits of 3D-Dry Disinfection Cloud Technology (3DDC):

- 1) Cover all areas in the room, those hard to reach or see.
- 2) Even distribution of disinfection and concentration.
- 3) No wetting or condensation on surfaces.
- 4) Disinfection is effective and at the same time “gentle” to electronics, computers, TV screens, light fixtures, furniture, HVAC system, instruments/gauges, wires, etc. a “feather touch”.
- 5) **3DDC** can reach and disinfect inside the HVAC system and air ducts.
- 6) **3DDC** is a fast application; rooms can be disinfected within 20-30 minutes.
- 7) The disinfection has the ability to eliminate all odors.
- 8) The disinfection does not leave any residual odor or smell.
- 9) **3DDC** requires fewer man hours to apply as compared to traditional cleaning processes.
- 10) **3DDC** has a unique and superior feature. All dust and air borne diseases inside the room are attracted to **3DDC** particles by adhesion, and are subsequently oxidized and precipitated providing a clean air and clean look to the room.
- 11) **3DDC** can Eliminate 100% the **manual touch point** decontamination process, giving the owner the benefits for saving man-hour and materials.
- 12) **3DDC** can eliminate or reduce substantially the **steaming** process for the rooms, as the **3DDC** system can safely disinfect seats, furniture, electronics, floors and others surfaces on a daily basis while providing the owner savings in labour hours, consumables/chemicals, down time, and as well prevent the deterioration of surfaces due to steaming.
- 13) **3DDC** system, can deal with any type of contaminations.
- 14) The **3DDC** system has capability to deal with heavy contamination loads effectively and safely via a shock dosing process.
- 15) **3DDC** process includes the complete supply of water treatment & disinfection chemicals filling station at site ,and on demands.
